However, it relies on Microsoft.NET Framework to run properly. Moreover, you will need to connect your computer to the Internet as it searches the world wide web for email addresses. After you complete the uneventful installation, you can add URLs either manually or by adding TXT, CSV, XML or HTML files. The program will extract any valid website links and proceed to search for PDFs and any emails contained by them. There are not too many settings you can tweak. This means its functionality is limited to a basic search, without sophisticated features such as autosave or email block.
